

## ULD Control

ULD Control is a complete web based software solution for managing your ULD devices any where 24x7

ULD Control ensures that ULD devices are available, at the right stations, at the right time and with the right quantity

ULD Control receives and process the standard (IATA/ATA) industry messages from the SITA network and will check these on the IATA standards

ULD Control will provide you of several reports and management information online or via e-mail

## Why ULD Control?

- ULDs are almost never where they need to be
- Costs for managing ULDs are not clear and transparent
- Managing ULDs is not the core business of an Airline
- Often resource problems to handle all the orders
- Limited budgets prevent investments in new tools
- Process chain is not clear and therefore not optimized
- Responsibilities are not clear for all the parties
- Lack of penalties for all the parties
- No sense of urgency for sales, stations and ground handlers
- Yearly increasing costs for managing ULDs

## Benefits of ULD Control

- Anywhere/anyplace 24x7 access to ULD information
- Cost reduction of managing the ULD's
- Simple costs structure: Fee per ULD per month
- Several ULD reports and management information
- Automatic processing of ULD SITA messages
- Keep track of the total history of an ULD
- Online and offline ad-hoc queries
- Higher productivity
- Keep track on idle ULDs

- Information and history of ULD repairs
- Automatic signaling of lost and found ULDs
- Better management on loaning and borrowing ULDs
